

# DO YOU HAVE EPIDERMOLYSIS BULLOSA (EB) AND EXPERIENCE ITCH?

**Stanford Dermatology** is investigating a pill called Serlopitant to see if it can help with EB-related itch. The pill is taken once daily. There is a 50% chance that study participants may be on a placebo (sugar pill).

Option available for virtual- only visits for those whose ability to travel is restricted due to the COVID-19 pandemic.

Contact our study coordinator Katie Sum (650) 441-9974  
(katiekts@stanford.edu).

For questions about participant's rights, contact 1-866-680-2906
